WINDOWS, DOORS AND GLAZING

What is QuietVue?

Enjoy a quieter, warmer, safer and more stylish home. QuietVue delivers advanced glazing that reduces noise, boosts insulation, enhances security and elevates your space, all in a sleek, modern design.

- Up to 44dB noise reduction
- Quiet Mark certified – including installation
- Excellent thermal insulation
- Enhanced security
- Contemporary finish

QuietVue is the only window in the UK Quiet Mark certified with installation included - a trusted mark of proven acoustic performance.

Why Quiet Mark Matters?

Quiet Mark is the trusted global expert for proven noise reduction. Only top-performing products pass its tough acoustic tests.

QuietVue is the UK's only window certified for both product and installation—so you get verified performance, not just promises.

Other windows may claim to be acoustic—but without certified installation, the results can fall short.

With Evander, what you see (and hear) is what you get.

WINDOWS, DOORS AND GLAZING

How does QuietVue work?

QuietVue is the result of rigorous testing with the University of Salford Acoustics Laboratory in Manchester.

We tested different combinations of materials, components and technologies to optimize our windows for road and air noise.

The internal chamber structure of the frame breaks up sound waves as they travel through the window and the dense outer skin provides further sound reduction. When installed with our high-performance acoustic glazing and using our tested and sector specific installation methodology, QuietVue is proven to reduce external noise by up to 44Db.

How much difference can it make?

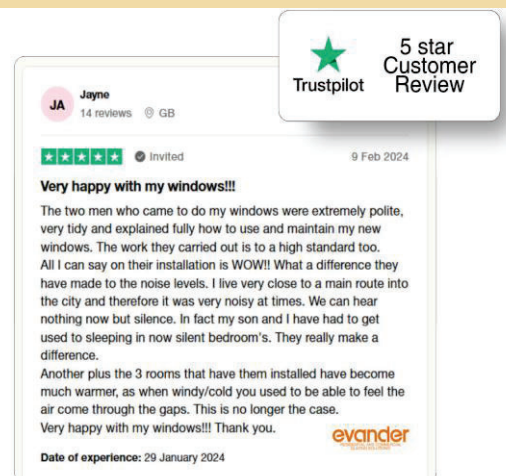

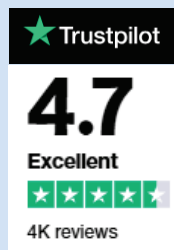

A lot.

The 44dB reduction achieved by our uPVC QuietVue window can give the equivalent improvement of the noise from heavy traffic being equivalent to that of less than the hum of a refrigerator.

What our customers say

We hear feedback like this all the time – QuietVue windows don't just reduce noise, they genuinely improve quality of life.

Our customers also rate us highly for our overall service and our windows, doors, garage doors and conservatories. We are rated excellent on Trustpilot with a score of 4.7 from over 4,000 reviews.

WINDOWS, DOORS AND GLAZING

What about energy efficiency and security?

Our uPVC and Aluminium Windows and Doors are PAS24 as standard. This is the security standard set for new properties, but we think its important for all new windows and doors.

QuietVue is also warm, with our uPVC QuietVue window achieving a B rating under the BFRC Window Energy Rating Scheme.

uPVC and Aluminium Windows and Doors benefit from up to 10 year guarantees on frames, glass and hardware.

Which properties does it suit?

Old or new, QuietVue looks great in any home.

With sculptured profiles for a traditional look, or a sleek chamfered profile for modern properties.

QuietVue is available in a range of colours and with a choice of handles that you would expect from any uPVC window.

What about other windows and doors?

Evander install windows and doors in uPVC, Aluminum and Timber.

The same glass, frame and installation technology can also be used on PVCU glazed entrance and French doors as well as Tilt & Turn Windows.

In our Aluminum range, we can include QuietVue specification glazing in Stormproof casements, Tilt & Turn windows, glazed entrance and French doors.

We also install patio doors and bifolds, but these are not available with noise reducing glazing.

WINDOWS, DOORS AND GLAZING

Why are Evander different?

Our experience comes from working with the UK's largest insurers – repairing and replacing windows when homes need it most.

We've developed our noise-reduction expertise through major infrastructure projects, from airports to road schemes.

So, no sales pitches. No pressure. Just great products, expert advice, and a straightforward approach you can trust.
